

The 2013 KDnuggets Software Poll was marked by a battle between RapidMiner and R for the first place. Surprisingly, commercial and free software maintained parity, with about 30% using each exclusively, and 40% using both. Only 10% used their own code - is analytics software maturing? Real Big Data is still done by a minority - only 1 in 7 used Hadoop or similar tools, same as last year.

The 14th annual KDnuggets Software Poll attracted **record participation** of 1880 voters, more than doubling 2012 numbers.

What Analytics, Big Data, Data mining, Data Science software you used in the past 12 months for a real project? [1880 voters]
